

PRISM and IE8 Hidden Menu Items.

If you are experiencing an issue with PRISM where the menu items are hidden beneath the next part of the web page this document describes a workaround.

There is a known bug in IE8 that affects ASP.net menus, the issue has been documented widely around the net, the following is an extract from the Microsoft website.

<http://windows.microsoft.com/en-GB/internet-explorer/use-compatibility-view#ie=ie-9>

Sometimes a website you're visiting doesn't look like you expect it to. Images might not show up, menus might be out of place, and text boxes could be jumbled together. This can be caused by a compatibility problem between Internet Explorer and the site you're on. When a site is incompatible with Internet Explorer, you'll see the Compatibility View button in the Address bar. You can only turn on Compatibility View in Internet Explorer for the desktop.

To turn on Compatibility View

1. See if the **Compatibility View** button  appears in the Address bar. (If you don't see the button, there's no need to turn on Compatibility View.)

2. Tap or click the **Compatibility View** button  to display the site in Compatibility View.

Once you turn on Compatibility View, Internet Explorer will automatically show that site in Compatibility View each time you visit. You can turn it off by tapping or clicking the button  again. Or, you can clear the entire list of sites using Compatibility View by deleting your browsing history.

Alternative method for setting compatibility mode.

In IE8 go to the Menu and select Tools, under the Tools item there is a 'Compatibility View Settings' option. Select this.

Please add **wales.nhs.uk** to list of websites.
